

# TFS4JIRA Documentation Home

Spartez Software has joined the Appfire family. [Learn more!](#)

TFS4JIRA enables you to automatically view your project - or issue - associated TFS / Azure DevOps check-ins in Jira as well as effortlessly synchronize changes made to the issues and work items between TFS / Azure DevOps. Follow these configuration steps:

- [create your individual TFS4JIRA synchronization profiles](#) and define the project collections you want to work with;
- map your Jira issues and Azure DevOps Server / Services work item types as well as the corresponding fields and values;
- enable the synchronizer which, from now on, is watching out for changes and making sure that Jira and TFS / Azure DevOps smoothly exchange information without you having to worry about it.

Enjoy the TFS4JIRA unique features, such as multiple TFS / Azure DevOps instances support and synchronization of work items from TFS / Azure DevOps.
