

Configuring estimation field for Team-managed projects

i This part of the documentation relates to **Agile Poker for Jira Cloud, Next-Gen (Team-managed) projects**.

If you use Jira Cloud Classic (Company-managed) projects navigate to [this page](#).

If you use Jira Server go to the [Agile Poker for Jira Server documentation](#).

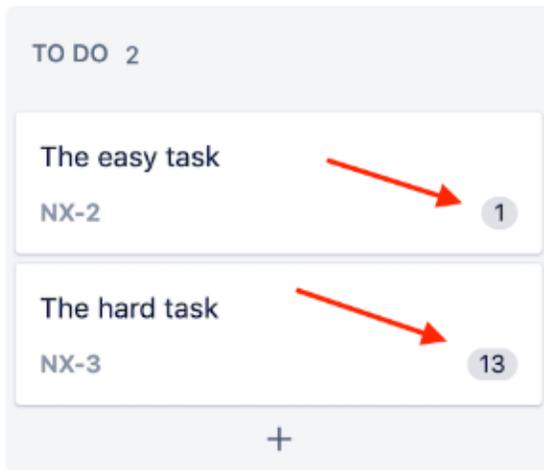

After all team members agree on an issue estimate, you usually want to have the agreed value saved in some Jira custom field (we call it the estimation field).

In Agile Poker for Jira Cloud for Team-managed projects, you can save estimates to available **time fields** or to any **numeric field**, including the Story point estimate field.

- [Configuring Story point estimate numeric field](#)
- [Configuring numeric custom fields](#)
- [Configuring Original estimate time field](#)

Configuring *Story point estimate* numeric field

Jira's default "Story point estimate" field is recommended for Team-managed project users to see estimates on the board. This field, unlike other Team-managed projects' numeric custom fields, is shared between all the Team-managed projects and can be standardized across the organization.

To configure the *Story point estimate field* for the board and Agile Poker estimated, follow the steps below:

1. Enable the *Estimation* feature in Project Settings (*Project settings Features Estimation*) and make sure *Story Points* is selected:

The Next Gen Project
Software project

Back to project

Project settings

- Details
- Board
- Access
- Issue types
- Automation
- Notifications
- Features**
- Apps

You're in a team-managed project

Features

Planning

Roadmap
Your roadmap is an optimized location to create and manage your epics. [Learn more about Roadmap](#)

Backlog
Plan and prioritize your team's work in a dedicated space. [Learn more about Backlog](#)

Board
View, track and manage work as it makes its way through your team's process. [Learn more about Board](#)

Reports
Analyze and track your team's work by reporting on the project's activity. [Learn more about Reports](#)

Issue navigator
Browse a list of issues in your project. Use the built-in filters and text search to find issues. [Learn more about Issue navigator](#)

Sprints
Complete work in fixed units of time. Requires a backlog. [Learn more about Sprints](#)

Estimation
Capture expected efforts to plan, track and analyze work. Impacts reports. [Learn more about Estimation](#)

- Story points:** Use units to estimate complexity, size and effort.
- Time:** Use minutes, hours, and days to estimate effort. The original estimate field is automatically added to issues when first enabled. Configure your fields manually after that.

By default, this action will enable the *Story point estimate* field in the Context fields settings in (*Project settings Issue types Issue type Context fields*) for all standard issue types. However, this can be adjusted, so make sure the *Context fields* have *Story point estimate* enabled.

2. Select "Story point estimate" field as Estimation Field in Session Creation (*Agile Poker Create session 1st step for Interactive session or 3rd step for other sessions*) or Configuration (*Agile Poker Join Session Configure Session settings Estimation field*).

Create Interactive session

Session name *

Interactive session name

Give your session a nice name so you are able to search and identify it afterwards (max. 100 characters)

Save this configuration as my personal default. [?](#)

Private session

Private sessions can only be seen by its participants, public sessions can be viewed by anyone with board and project access.

Multi-field estimation **NEW**

Estimate several fields at once using a weighted sum formula or Ability and Impact, ICE, RICE, WSFJ prioritization frameworks.

Estimation field *

Story point estimate BOARD DEFAULT

Estimation values

Standard Fibonacci

0 x 0.5 x 1 x 2 x 3 x 5 x 8 x 13 x 21 x 42 x 101 x

These values will be available to the participants. To use text labels, map them to numeric values, e.g. "XXL=34". [Learn more](#)

Suggested estimate

Consensus

Timer values

10 x 60 x

Timer values in seconds to help you stay on track and save your precious time. Need more timers? [Let us know!](#)

Select issues

Asynchronous session name

Async session

Estimation field *

Story point estimate BOARD DEFAULT

Filter

e.g. text ~ 'As User' AND IssueType = Story AND 'Story Points' IS EMPTY

NGP Sprint 1 0 issues selected

- Test Issue #1 NGP-1 = 6
- Test Ticket #2 NGP-2 = 8
- Test Ticket #3 NGP-3 = 3

NGP Sprint 2 0 issues selected

- Test Issue #4 123 NGP-4 = 1

[?](#) Missing issues? Make sure they are configured with the selected estimation field(s) to be shown here.

Previous

Start session

If, for some reason, you'd like to use some other field for saving your estimates just add a number field to the issue type via *Project settings Issue Types* and set that field as the "Estimation field" like in step 2 above.

Configuring numeric custom fields

Any numeric custom field created for a specific Team-managed project can be estimated with Agile Poker. The only requirement is that the field is present on *Project settings Issue types Issue type Context fields*:

The screenshot shows the 'Project settings / Issue types' page for 'The Next Gen Project'. Under the 'Story' issue type, the 'Context fields' list contains: Status, Assignee, Original estimate, Time tracking, and a 'Numeric custom field' (highlighted with a red box). The right sidebar, titled 'Fields', lists various field types: Short text, Paragraph, Date, Number, Time stamp, Labels, Dropdown, Checkbox, and People. Below this, 'PREVIOUSLY-CREATED FIELDS' includes Priority, Due date, and Environment.

NOTE Numeric custom fields for Team-managed projects are unique and can't be used for other projects.

Configuring *Original estimate* time field

The *Original estimate* time field is a little bit tricky to configure for Agile Poker because it requires *Time tracking* to be present in the *Context fields* list. It's possible that the *Original estimate* is present in your issue details and you can edit and save it, but it might be not available for Agile Poker if the *Time tracking* is missing from the *Context field* list.

Make sure both *Original estimate* and *Time tracking* are in *Context field* lists of issue types you plan to estimate:

This screenshot is similar to the first one but highlights the 'Original estimate' and 'Time tracking' fields in the 'Context fields' list with a red box. The 'Numeric custom field' is no longer highlighted. The rest of the interface, including the sidebar and 'PREVIOUSLY-CREATED FIELDS' section, remains the same.

By default, enabling the *Estimation* feature in Project Settings (*Project settings / Features / Estimation*) adds the required fields to the *Context fields* list for standard issue types:

Estimation

Capture expected efforts to plan, track and analyze work. Impacts reports. [Learn more about Estimation](#)

- Story points:** Use units to estimate complexity, size and effort.
- Time:** Use minutes, hours, and days to estimate effort. The original estimate field is automatically added to issues when first enabled. Configure your fields manually after that.
